JOINT PHOTOGRAPHIC INTELLIGENCE BRIEF

ARMY - NAVY - CIA

INSTALLATION: Possible Rocket Aircraft
LOCATION: Vladimirovka Airfield
B.E. NUMBER: NA
WAC NUMBER: 235

BRIEF NO.: JB-2-58
DATE: 8 January 1958
LAT.: 48° 18' N 25X1D
LONG.: 46° 12' E

ENCLOSURE: Sketch of aircraft

REMARKS:

A possible rocket plane has been identified at Vladimirovka Airfield. It is parked on the south missile loading pad of the Airborne Missile Assembly and Loading Area. An underground hangar in the area may be used to house the aircraft. The presence of a rocket plane at a missile range head would suggest connection with missile development. 25X1D

25X1D The plane has a cylindrical fuselage [redacted] in diameter. The wings are sweptback at an [redacted] degrees and the wing-span is [redacted]. The horizontal stabilizer is probably attached to the fuselage. The vertical stabilizer is large and the landing gear is very short. 25X1D

Collateral reports dating from 1948 through 1952 indicate that [redacted] scientists were working on various rocket plane designs at Experimental Plant No. 1 in Podberezhye, USSR. During this same period rocket aircraft flight tests were reported at Ramenskoye, Moscow/Salerevo, and Moscow/Khimki Airfields, and a location somewhere east of Stalingrad. 25X6
